"Dr. Cyrus Nozad and his staff were extremely accommodating and professional during our recent emergency. The receptionist who originally took our call was very patient and made sure we did not have to wait any longer than was necessary. All in all we were very pleased with our visit. From beginning to end, about 20 minutes. Everyone took their time with us but asked pertinent questions and made appropriate confirmations. Within one hour we had medications and had made follow-up appointments. Thank you."
